

VADIM GRIBANOV

Minsk, Belarus

+(375) 44 701 85 60 ◊ gribanov.vadim.e@gmail.com

EXPERIENCE

Peer Street, Inc. (Los Angeles, CA)

June 2018 - Present

Software Engineer(Independent Contractor)

Remote

- Working on several parts of the product

Silicon Valley Software Group LLC (San Francisco, CA)

March 2016 - April 2018

Software Engineer(Independent Contractor)

Remote

- Participated in various projects. Led a team of three frontend developers.
- Configured production server to serve frontend assets.
- Designed and developed multiple complex frontend application from scratch using React and Node.
- Covered frontend application with unit tests and integration tests.
- Setup automated code reviews with eslint and configured continuous integration using TravisCI and CircleCI.
- Did code reviews.
- Supported multiple project after active development. Supported frontend and backend applications, also helped iOS developers to fix easy bugs in iOS application and to migrate iOS application from Swift 2 to Swift 3.
- Built web crawlers using Selenium and Puppeteer.

Appcast Inc. (Boston, MA)

October 2015 - February 2016

Ruby on Rails Developer

Minsk, Belarus

- About: Appcast provides employers a new way to advertise their open jobs risk-free on a 'pay- per-applicant' basis across a network of 6,000+ career and consumer sites. Rather than spending per-click or per-posting, Appcast makes talent sourcing more effective with a guaranteed return-on-investment. It works with applicant tracking systems and requires no fees or long-term contracts – you only pay for the result you really want: a completed job application.
- Worked API service built on Ruby on Rails.
- Refactored and optimised Cost Per Action estimation algorithm.
- Built various Web crawlers using nokogiri.
- Worked on frontend application built on Angular.
- Implemented multiple landing pages with new design.

SivinTech LLC

December 2014 - September 2015

Ruby on Rails developer

Minsk, Belarus

- Took part in multiple projects.
- Implemented call center for our customer. It was built using Twilio as communication platform. Ruby on Rails was chosen to implement API. AngularJS was chosen to implement frontend app.
- Migrated old Java applet to Angular.
